## NEC Passenger Flow Management

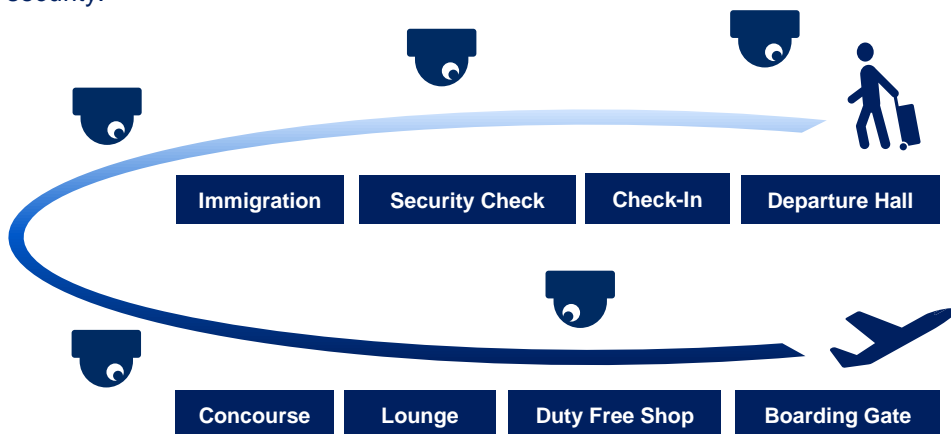

### ENHANCE AIRPORT SECURITY & PASSENGER SERVICES

NEC offers a comprehensive passenger flow management solution that provides real-time insights throughout the airport journey for efficient movement of passengers.

### The Technology

As the passenger moves through the touch-points, various cameras and sensors at different locations collect the necessary data. Through our advanced ICT solutions, we can analyse this data to give operators vital knowledge about the smooth running of the airport and how to increase revenue and enhance security.

## Use Cases

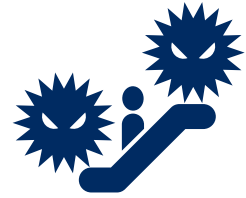

No-show PAX

Lost Kids

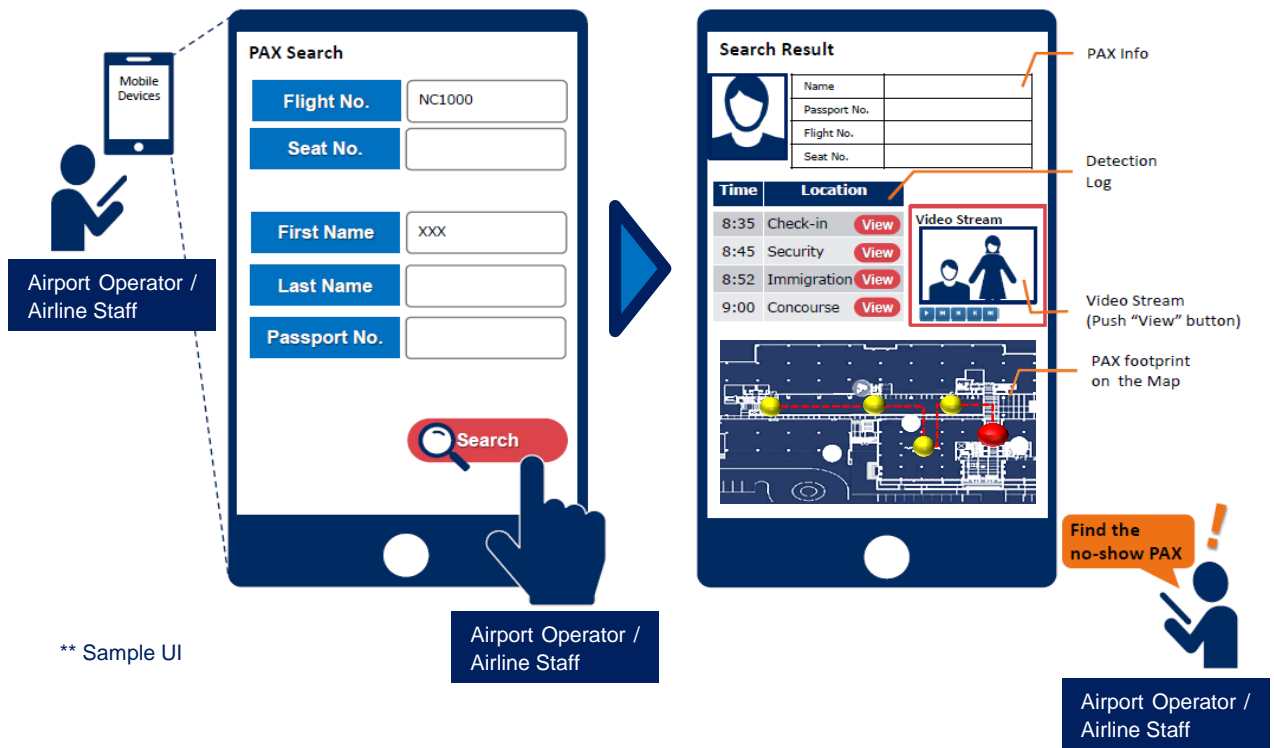

POI Movement

Disease Control

With NEC Passenger Flow Management, Airport Operators & Airlines can now instantly identify and locate any “no-show” passengers, lost kids, Persons-of-Interest (POI) and sick passengers real-time and even their movement and places they have been to. This effectively improves the operation and service level for both Airport Operators & Airlines.

## How It Works ?
